

The Mackenzie 2021 Sustainability Report

Mackenzie's Sustainability Centre of Excellence helps drive innovation in stewardship and ESG alignment across our investment boutiques. In the past year, we have engaged with 1,400 companies, trained and collaborated with peers to set sustainability standards in the asset management industry. These accomplishments reinforce our commitment to leading with sustainability.

Also, read up on how our Ivy, Greenchip, Resources, Betterworld, and Fixed Income Teams integrate sustainable investing into their investment process, with relevant stock and bond stories.

Sustainability at Mackenzie

An honest plan to reduce emissions

The world's major economies have made commitments to reduce greenhouse gas emissions by 50% by the year 2035. Getting there requires a significant increase in demand for resources such as copper, steel, nickel, and lithium. The Mackenzie Resources Team, led by PM Benoit Gervais, discusses how commodities will factor into power generation and electric vehicle solutions.

Learn more about the scale of these practical solutions below:
